[Quiver Killer Inserts](#)

The Piste Office

is proud to announce it's appointment as the exclusive UK distributor for Quiver Killers.

Quiver Killers are threaded inserts for ski binding mounting holes that once installed & with the bindings screws exchanged for M5 machine screws, allow the bindings to be removed/reinstalled as often as you like - just like snowboard bindings.

The inserts are made from non rusting stainless steel & have a closed end to give a water tight seal to the ski's core. The course outer thread grips the ski's core whilst the fine rolled inner thread gives the M5 bindings screws a metal to metal fixing to the ski, all of which combines to give a mount that's over 40% stronger than a conventional binding mount.

Benefits:

- save cost by sharing bindings across other skis
- reduces bulk/weight for travelling
- switch between alpine & touring bindings on the same skis
- bindings quickly removed & reinstalled with just a no.2 pozi driver

Tech Facts:

- Outer thread: 5/16-18
- Inner thread: M5
- Overall length: 8.6mm
- Inner thread depth: 6.2mm
- Weight: 1.1g

Quiver Killers are available to purchase below for your own installation or see the 'Bindings & Inserts Installation' section for details of **Jon's** installation service.

Araldite 2011 Standard Precision - 2x100ml
£39.50 (including 20 % tax)
